FILLER MASTERBATCH · MADE IN EGYPT

How much can filler save your line?

Every percent of Blau Batch filler masterbatch you dose replaces the same share of virgin resin. Work out your saving here in two minutes.

BLAU BATCH

1 The principle

Saving per ton = Dosage % × (Resin price − Filler price)

Filler masterbatch costs less per ton than virgin PE or PP, so the saving grows with every percent you dose.

DOSAGE	VIRGIN RESIN REPLACED PER TON	PER 100 TONS OF OUTPUT
10%	100 kg	10 tons
20%	200 kg	20 tons
30%	300 kg	30 tons
40%	400 kg	40 tons

2 Typical starting dosage

Starting points only. The right level depends on your machine, thickness and performance targets; we confirm it with a trial on your line.

APPLICATION	RECOMMENDED GRADE	STARTING DOSAGE
Shopping & T-shirt bags	FMPE-1075 / 1080	15–30%
Garbage bags & liners	FMPE-1080	20–40%
General packaging film	FMPE-1070 / 2070	10–20%
Agricultural film	FMPE-1070	5–15%
PP woven sacks & raffia	FMPP-1075 / 1080	5–20%
PP injection moulding	FMPP-2180	10–30%

3 Your numbers

Resin price _____ EGP / ton

Filler price _____ EGP / ton

Dosage _____ %

Monthly output _____ tons

Monthly saving ≈ dosage × price gap × output _____ **EGP / month**

Filled in with you by our team at the stand. Ask for a sample bag to run a trial.

Filler raises film density (for example FMPE-1080 is 1.7 g/cm³), so output per square metre changes with dosage. Our technical team will check the yield on your product with you.
